

## TANK BLANKETING REGULATORS BKVI2

### DESCRIPTION

Tank blanketing valves are commonly used in tank storage systems to prevent and protect against explosions (avoiding flammable liquids being vented from the vessel), to control product contamination against external air that may fill the vapour space, to reduce evaporation losses (consequently, production losses), to reduce internal corrosion (caused by air and moisture) and to prevent vacuum condition. The blanketing process consists in covering the stored medium, usually a liquid, with a gas (normally N2).

### MAIN FEATURES

Compact design.  
Non-rising adjustment knob.  
FDA / USP Class VI compliant seals.

### STANDARD SURFACE FINISH

Internal movable parts and machined surfaces:  
≤ 0,76 micron Ra – SF3.  
Other surfaces: as casted.  
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection 1/4".
- Gauge connection on body.
- External pulse line.
- Dome-loaded version.
- Blanketing with vacuum.
- Top cap (adjustment screw with cover).
- ATEX  version.

USE: Compressed air, nitrogen and other gases compatible with the construction.

AVAILABLE MODELS: BKVI2 – low pressure venting valve.

SIZES: DN 15 and DN 25.

REGULATING RANGES: 5 to 10 mbar; 10 to 50 mbar; 20 to 200 mbar; 50 to 500 mbar; 5 to 4000 mbar (dome-loaded).

CONNECTIONS: Flanged EN 1092-1 PN 16.

INSTALLATION: Vertical installation recommended, to allow drainage, or horizontal as close to the process as possible in order to prevent long pipe sections and flow restrictions.  
See IMI – Installation and maintenance instructions.
