

PILOT OPERATED PRESSURE REDUCING VALVES PRV47 and PRS47

DESCRIPTION

The ADCA PRV47 pilot operated pressure reducing valves are designed for use with steam, compressed air, nitrogen and other gases compatible with the construction materials.

The PRV47 can be installed in pressure reducing stations throughout all industries, and provide sensitive and accurate control even when inlet pressure fluctuations or relevant flow variations occur.

MAIN FEATURES

Precise control of downstream pressures from 0,07 bar to 17 bar.

Robust complete steel or stainless steel construction.

Suitable for dead end conditions.

Guided piston and valve stem.

Hardened plug.

- OPTIONS:**
- Soft sealing.
 - Low pressure top.
 - Dome loaded version.
 - Bottom cover drain connection.
 - Stellited plug and seat.
 - Internal sensing line.

USE: Saturated steam, compressed air and other gases (Group 2) compatible with the construction (except oxygen).

AVAILABLE MODELS:

PRV47, PRV47E – standard version for steam.
 PRV47I, PRV47IE – stainless steel version for steam.
 PRV47G, PRV47GE – steel version for compressed air and gases.
 PRV47GI, PRV47GIE – stainless steel version for compressed air and gases.
 Suffix "E": Version with solenoid valve for remote closure.
 PRS: All models above are available with an extra sustaining valve pilot, e.g. PRS47G (see Fig. 8).

SIZES: 1/2" to 2" ; DN 15 to DN 50.

CONNECTIONS: Female threaded ISO 7 Rp or NPT.
 Flanged EN 1092-1 PN 40.
 Flanged ASME B16.5 Class 150 or 300.
 Socket weld (SW) ASME B16.11.

INSTALLATION: Horizontal installation.
 See IMI – Installation and maintenance instructions.
 A "Y" strainer, humidity separator and steam trap should be installed upstream of the valve.

USEFUL NOTES ON VALVE AND PIPE SIZING:

Two regulators in parallel should be used on larger systems where minimum flow is less than 10% of the maximum. If the flow rate is unknown it is possible to estimate it, based on pipe sizing or equipment heat requirements (consult manufacturer).

BODY LIMITING CONDITIONS		
CLASS 150 *	PN 40 / CLASS 300 **	RELATED TEMPERATURE
ALLOWABLE PRESSURE	ALLOWABLE PRESSURE	
19,3 bar	40 bar	- 10 / 50 °C
17,7 bar	37 bar	100 °C
12,5 bar	31 bar	239 °C
10,2 bar	28 bar	300 °C

Minimum working temperature: -10 °C.

* Rating according to EN 1759-1:2004.

** Rating according to EN 1092-1:2018.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 40	Category
DN 15 to 32 – 1/2" to 1 1/4"	SEP
DN 40 to 50 – 1 1/2" to 2"	1 (CE marked)

LIMITING CONDITIONS

Valve model	PRV47	PRS47	PRV47E PRS47E
Body design conditions	PN 40	PN 40	PN 40
Maximum upstream pressure (steam)	28 bar	17 bar	10 bar
Maximum upstream pressure	31 bar	17 bar	10 bar
Maximum downstream pressure	17 bar	17 bar	10 bar
Minimum downstream pressure *	0,35		
Maximum operating temperature	250 °C		
Maximum reducing ratio	See capacity tables		
Rangeability	10:1		
Maximum hydraulic factory valve body test	60 bar		

* 0,07 bar with low pressure top (limited at 7 bar inlet).

Pressure and temperature limiting conditions may change if "G" version for compressed air and gases is chosen or soft sealing/piston rings are used.

DIMENSIONS (mm)

SIZE	A				B	C	D	E	F	G	H	I *	WEIGHT (kg)
	PN 40	CLASS 150	CLASS 300	THREADED									
DN 15 – 1/2"	150	184	190	140	56	275	95	120	162	195	1/4"	3/8"	13
DN 20 – 3/4"	150	184	194	140	56	287	105	120	174	195	1/4"	3/8"	13,5
DN 25 – 1"	160	184	197	150	56	287	115	120	174	195	1/4"	3/8"	14
DN 32 – 1 1/4"	180	-	-	170	68	299	140	120	186	195	1/4"	3/8"	18
DN 40 – 1 1/2"	200	222	235	190	75	307	150	130	194	195	1/4"	3/8"	22
DN 50 – 2"	230	254	267	230	84	323	165	160	210	195	1/4"	3/8"	31

* Drain connection (optional) for steam trapping. This drain connection does not replace the humidity separator, but can be useful if, e.g., the valve stops operating for long periods of time.

Remarks: As standard, connections H and I, in valves manufactured with ASME B16.5 flanges, SW or NPT threads, are female threaded NPT. In valves manufactured with EN 1092-1 flanges or ISO 7 Rp threads, these connections are also female threaded ISO 7 Rp.

MATERIALS		
POS. N°	DESIGNATION	MATERIAL
100	Sensing pipe	Copper or stainless steel
101	Compressed air supply	Copper or stainless steel
102	P10 air filter regulator	Polycarbonate
103	Solenoid valve	C37 (brass) or stainless steel
104	ADCA IS100 filter	AISI 316 / 1.4401
105	ADCA PS7 pressure sustaining valve	Carbon steel or stainless steel
106	Drain connection	Copper or stainless steel

PRV47 standard – for steam, compressed air and other gases (Fig. 4)

The high pressure upstream gas enters the main valve and the pilot valve. Compression of the regulating spring over the diaphragm causes the pilot valve to open, admitting regulated pressure to the piston chamber. The force exerted by the regulated pressure on top of the piston pushes it down which, in turn, opens the main valve. The downstream pressure is then transmitted through the sensing line, acting below the diaphragm.

Any downstream pressure increase deflects the diaphragm, and the pilot valve closes, thus shutting off regulated gas to the piston which, in turn, closes the main valve. When the desired downstream pressure is achieved, the valve opens again, repeating the process.

Fig. 4

The external sensing pipe (n° 100) must always be connected unless the valve is supplied with internal sensing line. It should be fitted in the downstream pipe at a distance of, at least, 1 meter or 15 pipe diameters, whichever is greater, from the valve and other fittings. A spool piece can be supplied to house the sensing pipe.

Warning: The internal sensing line is not recommended when:

- The reduced pressure is below 50% of the inlet pressure (mandatory for pressure reductions greater than 10:1);
- Instability of reduced pressure occurs;
- When a low pressure top assembly is fitted;
- When difficult outlet pipe work conditions occur.

PRV47 dome loaded (Fig. 5)

The loading force is exerted on the pilot valve diaphragm by an external gas signal rather than by the regulating spring. This feature allows remote adjusting of the downstream set point pressure using a relieving gas pressure regulator or an I/P converter. Allows faster response to pressure changes and maintains outlet pressure more accurately under flowing conditions, when compared to the standard spring loaded version, minimizing droop.

The loading control pressure is approximately the same as the required outlet pressure ($\pm 0,2$ bar)

Fig. 5

PRV47 with drain connection (Fig. 6)

The optional drain connection is specially recommended when it isn't possible to install the humidity separator close to the valve, when the valve is under no-flow static condition during large periods of time or for system cleaning during start up.

Fig. 6

PRV47E with solenoid valve for remote closure (Fig. 7)

The PRV47E operates like the standard valve, but it allows remote closure, by means of a switch or timer. When the solenoid valve closes, the pressure signal to the pilot valve is interrupted, causing the main valve to close.

TECHNICAL DATA (SOLENOID VALVE)	
Body material	C37 (Brass) or Stainless steel
Maximum operating pressure	10 bar
Maximum operating temperature	180 °C
Level of protection	IP 65
Rated voltage	230 V AC ±10%, 24 V DC ±10% *
Power consumption	12 VA ±10% (AC) , 12 W ±10% (DC)

* Others on request.

Fig. 7

PRS47 pressure reducing and sustaining valve (Fig. 8)

The PRS47 is a derivative of the PRV47 and consists in a combination between a pressure reducing valve and a pressure sustaining valve. While the pilot fitted on the main valve body controls downstream pressure, a secondary pilot valve (105), in this case a pressure sustaining valve, fitted on the side of the PRV controls the upstream pressure. The pressure sustaining valve is closed until the established set pressure is reached and so is the main valve, since there is no flow feeding its pilot. As soon as the set pressure is reached, the pressure sustaining valve opens, allowing flow to the PRV's pilot valve which, in turn, opens the main valve.

Pressure sustaining / reducing / solenoid with internal sensing line a)		YO									
Diaphragm											
Standard diaphragm					S.						
Low pressure diaphragm					L.						
Regulating range											
Green spring – 0,35 to 2 bar – single diaphragm						1					
Blue spring – 1,5 to 5,5 bar – single diaphragm						2					
Red spring – 3,5 to 8,5 bar – double diaphragm						3					
Black spring – 7 to 17 bar – double diaphragm						4					
Dome loaded – 0,35 to 4 bar – single diaphragm c)						6					
Dome loaded – 2 to 17 bar – double diaphragm c)						7					
Piston rings d)											
Bronze		(1)									
FKM		V									
EPDM		E									
NBR		N									
Drain connection											
Standard valve		(1)									
Drain connection ISO 7 Rp 3/8"		D									
Valve plug											
Standard metal to metal with hardened plug									1		
Stellited valve and plug									2		
Soft plug – Virgin PTFE d)									3		
Soft plug – PTFE/GR d)									4		
Soft plug – Rulon d)									5		
Soft plug – Viton d)									6		
Connections											
Threaded ISO 7 Rp										A	
Threaded NPT										C	
Socket weld (SW) ASME B16.11										H	
Flanged EN 1092-1 PN 40										N	
Flanged ASME B16.5 Class 150										U	
Flanged ASME B16.5 Class 300										V	
Size											
DN 15 or 1/2"											15
DN 20 or 3/4"											20
...											
Special valves / Extras											
Full description or additional codes have to be added in case of non-standard combination.											E

a) Solenoid valve voltage must be specified.

b) PS7 sustaining valve, see catalog for spring range.

c) The loading control pressure is approximately the same as the required downstream pressure ($\pm 0,2$ bar).

d) Valve limited to the materials maximum operating temperature. Contact manufacturer for more details.
